Task 7.3: Intelligent Recommendation system (development)

Overview:

In this assessment, you need to develop an intelligent system using machine learning for a business to **automate product recommendation** for their customers. The intelligent system should interact with the customer and process customer request. The customer interact with the system using text, image and etc.

Your own recommendation system is based on the approved proposal.

This task will help you to understand how to develop an intelligent recommendation system using AI.

Submission the following files to Ontrack:

For this task you need to develop an intelligent system using machine learning system for a business to automate product recommendation for their customers. You need to submit the following task:

- Develop the intelligent recommendation system to automate product recommendation based on the approved proposal. This system needs to interact with the customer and provide the customized recommendation based on the customer preference.
- A document includes the Screen shot of your code running along with the description of your recommendation system.
- The developed recommendation system (code).

The focus of this task is on building an intelligent recommendation system using AI.
